CUSTOMER SERVICE IS OUR CORNERSTONE

Your vehicle is the second largest investment you're likely to make. Preserve its value and your safety by having it repaired professionally

Estimating & Warranties

A detailed checklist is used to analyze the damage to your auto, while a close, personal inspection is conducted. Using this information, we provide you with a comprehensive report of the damage. This damage appraisal provide us with a blueprint to return your vehicle to pre-accident condition. Our estimators have an average of 20 years of experience working with insurance companies and will assist you in any way possible.

Our warranty is based on years of experience in the autobody field. We offer the following in writing when your repair is completed:

- We guarantee all workmanship performed by our company. We certify that the structural restoration of your vehicle was based upon vehicle manufacturer's recommended specifications.
- This warranty covers parts and materials used in the repair and the labor required to complete the process. We use the finest products, techniques and craftsmanship to complete the job to your satisfaction.

Bodywork

Most of today's modern automobiles are of unibody construction. Unibody repairs need special equipment, operated by journeyman technicians. Our technicians use only the finest material and equipment. Each vehicle is repaired to factory specifications with our State-of-the-Art collision repair system. The proper repair of unseen damage is critical to the safety and performance of any vehicle.

Many auto manufacturers specifically state that specialized unibody repair equipment be used in their repair for the ultimate in safety and handling performance.

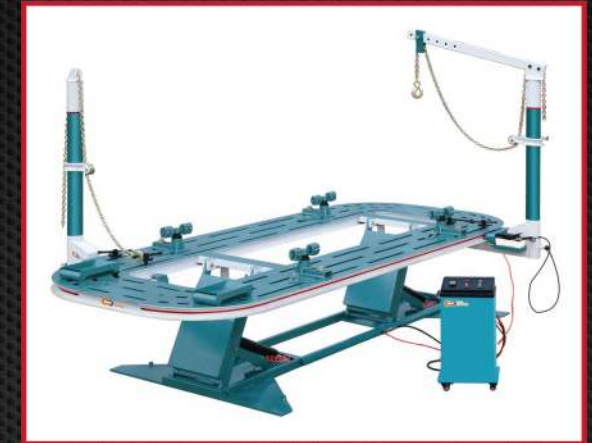

Only the highest quality parts are used to ensure proper body panel alignment. All body work is thoroughly inspected by our Quality Assurance team prior to entering the refinish department.

Painting

Today's modern factory finishes incorporate multiple layers of highly specialized paints. Without the most sophisticated techniques and training, hi-tech factory finishes cannot be duplicated. We have made a major investment with DuPont performance coatings, the finest painting system available. We take special pride in our ability to match factory finishes as the final step in our repair process. Only factory matched finishes are used, with special attention to paint texture, gloss and hue.

Training & Technology

New technologies in both painting and unibody design mean new training. We train and re-train with job clinics, factory schools, video tapes and custom designed in-house training programs.

Over 90% of cars and light trucks being built will be of unibody design. Unlike the old body-on-frame models, unibodies must be repaired with expensive hi-tech equipment, even if the damage is minor. This equipment must be operated by highly trained technicians. Equipment and training are expensive, but we have made the necessary investment to properly repair your vehicle. Our facility is among a small number of technically advanced shops capable of restoring unibody cars to factory specifications... reassuring you of a quality repair to your vehicle.
